Supervisor : Sri Mawarni, M.Si

ABSTRACT

This application is intended to support the efficiency of inventory management in the Tanjung Makmur BUMDes, which consists of a savings and loan unit and a trade and production unit. The core features include detailed inventory recording, inventory management, report printing, password reset, and statistical analysis. The application allows full recording of inventory data, including incoming and outgoing goods with date and quantity, and provides statistical views of incoming, damaged, unused and total inventory. Thus, this application will provide important support for BUMDes in optimizing their inventory management.
