ABSTRACT

At the moment almost all college making Practical Work (Internship) as one of the requirements for the graduation process. The data that required during internship is not little, such as internship profile, internship schedule, internship assignment, and internship score. The data that being kept is still in physical form so there are risks such as damaged or lost. To resolve those problems then a web-based internship data processing application is proposed on Regional Inspectorate Service in Bengkalis Regency. This application built with PHP programming language and MySQL as the databases. By testing using the black-box method, the system that was built running and functioning properly.

Keywords: Application, Intership, PHP, MySQL, Website.
