## **Abstrak**

Penelitian ini bertujuan untuk mengetahui terkait penerapan keselamatan dan kesehatan kerja (K3) pada proses bongkar muat *oil* PT Tanayu Bahtera Segara. Adapun rumusan masalahnya meliputi Bagaimana penerapan *safety management* yang dilakukan otoritas pelabuhan dermaga B Dumai untuk meningkatkan keselamatan dan kesehatan kerja (K3) pada proses bongkar muat *oil*, Apa kendala ketika menerapkan *safety management* terhadap keselamatan dan kesehatan kerja (K3) pada proses bongkar muat *oil*, Tempat penelitian ini dilakukan di PT Tanayu Bahtera Segara dan didermaga B Dumai, yang dilaksanakan dari Februari hingga Juli 2023. Metode yang digunakan adalah metode deskriptif kualitatif, dan metode pengumpulan data observasi, wawancara, dan dokumentasi. Hasil penelitian menunjukkan bahwa penerapan *safety management* terhadap keselamatan tenaga kerja bongkar muat didermaga B Dumai belum terlaksana dengan baik, dan dilapangan banyak terjadi pelanggaran-pelanggaran terhadap pelaksanaan *safety management* yang dilakukan oleh tenaga kerja. Adanya pelanggaran yang terjadi, maka prosedur kerja perlu dibenahi agar keselamatan tenaga kerja bongkar muat *oil* terjamin. Adapun kendala yang dihadapi saat menerapkan *safety management* dipelabuhan dermaga B Dumai yaitu kurangnya pengawasan oleh kepala kerja dan otoritas pelabuhan, kurangnya pengetahuan pekerja akan pentingnya *safety management*, dan kurangnya kesadaran pekerja akan pentingnya *safety management*, serta ketidaknyamanan para pekerja saat menggunakan APD, dan salah satunya minimnya persediaan APD.

***Abstract***

*This study aims to determine the application of occupational safety and health (K3) in the loading and unloading process of PT Tanayu Bahtera Segara oil. The formulation of the problem includes How to implement safety management carried out by the Dumai port B port authority to improve occupational safety and health (K3) in the oil loading and unloading process, What are the obstacles when applying safety management to occupational safety and health (K3) in the oil loading and unloading process, The location of this research was conducted at PT Tanayu Bahtera Segara and B Dumai dock, which was carried out from February to July 2023. The method used was a qualitative descriptive method, and the method of collecting observation, interview and documentation data. The results of the study show that the application of safety management to the safety of loading and unloading workers at Dumai B dock has not been carried out properly. And in the field there are many violations of the implementation of safety management carried out by the workforce. If violations occur, work procedures need to be improved so that the safety of workers loading and unloading oil is guaranteed. The obstacles encountered when implementing safety management at the B Dumai port are the lack of supervision by the head of work and the port authority, the lack of knowledge of workers on the importance of safety management, and the lack of awareness of workers on the importance of safety management, as well as the discomfort of workers when using PPE, and one of them minimal supply of PPE.*
