***ABSTRACT***

*The implementation method is important in construction work, where the final result of a job greatly influences the implementation of the planned method. So that the delivery of this implementation method is easy to understand, this implementation method is conveyed through visualization in the form of 3D animation. This research is a qualitative research that will describe the implementation method for the construction of the Oleo Warehouse 2 building. The first step starts with a 3D image and continues with the creation of a 3D animation video. The result of this study is the formation of a 3D animation video from the sequence of work in the implementation method for the construction of the Oleo Warehouse 2 building. The sequence of work is: 1. Mobilization, 2. Land clearing, 3. Lower structure work, 4. Upper structure work, 5. Demobilization.*
