Abstract

The role in the use of work safety equipment is one of the efforts to prevent or reduce accidents at work. Therefore, it is hoped that all officers who work at the port will continue to prioritize safety at work in order to avoid unwanted things. The purpose of this research is to find out what efforts are being made to implement (K3) especially during this pandemic period.

This research was conducted at the port of Roro Bengkalis-Pakning. The source of the data obtained is primary data obtained directly from the place of research by observing and reviewing literature and literature related to research. The data processing method used is descriptive method, the author tries to observe cases that often occur in ports, then makes important notes about the causes and solutions that will be used to increase awareness of the importance of maintaining occupational health and safety during this pandemic.
