This research was conducted at Bank Riau Kepri Bengkalis Branch. This study aims to determine how the influence and how much influence Front Office service ability, namely intellectual ability on customer satisfaction at Bank Riau Kepri Bengkalis Branch partially, to find out how the influence and how much influence Front Office service ability, namely physical ability on customer satisfaction Bank Riau Kepri Bengkalis branch partially, to determine the influence and how much influence the service ability of Front Office officers, namely Intellectual ability and Physical ability on customer satisfaction at Bank Riau Kepri Bengkalis Branch simultaneously. The type of research used is associative causal research with a quantitative approach. The population of this research is customers who have savings or are registered in savings products at the Riau Kepri branch of Bengkalis, a sample of 100 respondents who were taken using purposive sampling technique and data collection methods using questionnaires. Data analysis used is descriptive statistics, classical assumption test, multiple regression analysis, data conclusion with T test, F test and the coefficient of determination (R²). The result of the t test calculation shows that the intellectual ability variable (X₁) is $T_{count} 2.932 > T_{table} 1.984$ with a significance value of $0.004 > 0.05$, which means that intellectual ability has a positive and significant effect on customer satisfaction with a determination coefficient of 26.3%. physical ability variable (X₂) is $T_{count} 3.072 > T_{table} 1.984$ with a significance value of $0.003 > 0.05$ means that physical ability has a positive and significant effect on customer satisfaction with a determination coefficient of 26.9%. Based on the results of the calculation of the F test with the results that show the variables of intellectual ability (X₁) and physical ability (X₂) simultaneously are $F_{count} 23.717 > T_{table} 3.09$ with a significance value of $0.000 > 0.05$ means intellectual ability (X₁) and physical ability (X₂) has a positive and significant effect on customer satisfaction and the coefficient of determination is $0.328 = 32.8\%$

Abstract

The Tanjung Kapal road to Darul Aman is a road that connects the two villages. This road has pavement conditions that are no longer suitable for use because of damage. Therefore, the Bengkalis Regency Public Works Office included the road in the Special Allocation Fund program for the 2020 fiscal year with a rigid road pavement type. But the Ministry of Public Works and Public Housing wants LHR, data carrying capacity and DDT survey data to determine the type of pavement suitable for the road. To answer the problems mentioned above, and as an objective of this plan, it is necessary to plan the thickness of the road pavement using LHR data and basic soil carrying capacity data. On the other hand, a comparison of the draft budget is needed for the type of rigid and flexible pavement. Based on the results of planning with DDT and LHR data, the rigid pavement was obtained using the Pd T-14-2003 method with a thickness of 160 mm with an estimated cost of Rp.13.197.690.000,00-. Then, the flexible pavement method of the 2017 Road Planning Design Manual is 100 mm thick with an estimated cost of Rp. 13.826.900.000,00-.
