ABSTRACK

Welding work practice is one of the practical courses that must be carried out by students majoring in shipping engineering at the Bengkalis State Polytechnic. One of the tools in the welding process in the room or workshop is a welding table. Electric welding machines need tools that can support someone who wants to weld so that with the help of operators it is easier to do welding. Therefore, in planning this final project the author takes the title of the problem above, namely "Design of a Workbench for Learning Demonstration Media in the Welding Workshop of the Department of Marine Engineering, Bengkalis State Polytechnic".

Keyword: welding, welding table, learning media.
