ABSTRACT

In the last few decades, the use of household electronics (Air Conditioner (AC), Washing Machine and Refrigerator) has increased significantly. Because these electronic devices are used continuously, they are very susceptible to damage. Currently handling customer complaints about damage to the washing machine takes a long time. This makes customers have to wait to repair their electronics such as washing machines, refrigerators and air conditioners. A washing machine is an electronic household appliance that functions to facilitate human work in washing clothes. Continuous use of the washing machine may be very susceptible to damage.

Keywords: Washing machine, Electronic goods, energy saving
