**ABSTRACT**

*The new student admission system is one of the processes that exist in educational institutions such as schools and other educational institutions, which is useful for facilitating the process of accepting new students. In this case, the implementation of the Community Learning Activity Center (PKBM) of Bina Insan Mandiri in Tangun Village, which so far has been done manually and has not used the system. Tangun Village online. The results of the research application that I made is an application that can manage the registration process at PKBM Bina Insan Mandiri in Tangun Village which makes it easier for people who want to get a diploma. With this application, people in Tangun Village can register online with the requirements that can be seen in the application. This application uses the Laravel, HTML and MySQL framework.*
