ABSTRACT

This final project is structured as a research stage that aims to determine the implementation of portership supervision procedures in improving security and safety at the Tanjung Harapan Selatpanjang port. To find out the implementation of harbormaster supervision in improving the security and safety of passengers at the Tanjung Harapan Selatpanjang port. The place of this research was carried out at the Tanjung Harapan Selatpanjang port which was carried out from February to July 2022, the method used was qualitative, in this case the author collected data using data collection methods including observation, documentation and interviews. The results of this study are that the implementation of procedures in the supervision of porters in improving security and safety at the port of Tanjung Harapan Selatpanjang is still not good because, in the implementation of checking these supervisory procedures are still often ignored and sometimes not carried out as they should. and safety at the Tanjung Harapan Selatpanjang port is still not optimal because there is no direct check from the portmaster regarding the condition of the ship, ship facilities only issue certificates without any accurate inspection.
