

**OPTIMIZATION OF THE USE OF FLOATING JETTY
(PONTON) ON PASSENGER MOBILIZATION AT TANJUNG
HARAPAN SELATPANJANG PORT**

Abstract

This final project research proposal aims to determine the process of using a floating jetty or pontoon at the Tanjung Harapan Selatpanjang port which currently only uses one pontoon on the right side which must optimize so that it runs efficiently in these activities. port authorities conducted at the port of Tanjung Harapan Selatpanjang. This research will be carried out from March to May 2022. This research uses descriptive, qualitative and interview methods, observations, and documentation in the use of a floating jetty or pontoon. As for the results in conducting this research.is to be able to optimize the use of a floating jetty or pontoon properly and correctly in the use of a jetty so that it does not break for both. The results of this study are optimizing the use of floating jetties for passenger mobilization in Tanjung Harapan Selatpanjang to facilitate boarding and disembarkation of passengers and boat docks to overcome the queues of docking ships so that they can run effectively and efficiently in optimizing the use of floating jetty.

Keywords: optimization, use, floating jetty
