**ABSTRACT**

*This research aims to help business people in making financial records. One of them is a business at the Libra Print and Photocopy Shop in Bengkalis Riau. To support the business, one of the ways to do this is to manage business financial data by making financial reports in the form of income and expenditure reports. The problems experienced so far in making financial records are still some obstacles, namely there is no privacy between the shop owner and the cashier. Based on these problems, the solution offered in this research is a Website-Based MSME Financial Recording Application. This research uses a qualitative descriptive method. In the data collection process is done through interviews and observations. This research produces a website-based financial recording application with the PHP (Hypertext Preprocessor) programming language with the Laravel framework and MySql as a database management system. This application produces output that displays the income statement and financial position. By utilizing the financial recording application can help business people to solve the problems experienced, so that their business becomes better and increases.*
