ABSTRACT

The Community and Village Empowerment Service requires skilled human resources in all fields to achieve its vision. One effort to improve the quality of human resources is by holding internship programs. Currently, internship data processing requires staff to fill out profiles, schedules and assessments of interns through provided document forms. Therefore, a Website-Based Internship Assessments Application was created to ensure valid and accurate data. The benefits of this Website-Based Internship Assessments Applications system include increased efficiency, accuracy, and transparency. This system allows for more structured assessments, organized data, faster processing compared to manual methods. This system also facilitates data access for various stakeholders.
